SERVICES

**Description.** Ajax is a modular, adaptable, and highly mobile ballistic shield system that provides operators with superior levels of ballistic protection. Ajax has earned the reputation for enabling firearms teams to safely, securely, and quickly close-down hostile and dangerous adversaries.

**Shield Protection Levels.**

- Ballistic Protection BS EN 15522/1036 Level FB/BR6

**Options.**

- Chassis with three centre panels.
- Chassis with three centre panels and two side wing panels.

**Key Features and Benefits.**

- Large 250mm diameter wheels, optimised for urban environments.
- Rising front wheels that enable the system to traverse curbs, door thresholds and ground debris.
- Wheels can withstand direct shots and fragmentation.
- Articulating rear wheel assembly that enhances manoeuvrability.
- 40kg maximum component weight enables the system to be assembled by two personnel.
- Modular armour panels that are interchangeable, making the system adaptable to the mission.
- Side panels that provide maximum coverage and can swivel to negotiate doorways and elevators.
- Multi-hit capability providing protection against two shots at the same point of impact.
- Anti-spall and ricochet protection that minimises risk of collateral injury.
- Two separate ballistic windows that provide visibility can be sustained if one is shot.
